Professional Summary

Engineering Manager with 9+ years of software engineering experience and 5+ years leading teams. Remains hands-on in architecture, system design, and coding, with experience spanning backend services, REST APIs, and web applications using Go, Ruby, React, Redis, and Kafka. Leads teams of 7–10+ engineers delivering critical business platforms, with measurable improvements in processing time, latency, and reliability at a scale of millions of users.

Skills

Programming Languages: Go, Ruby, Java, PHP, TypeScript, JavaScript, Python

Frameworks: Ruby on Rails, React, Next.js, Yii

Databases: PostgreSQL, MySQL, Redis, MongoDB, Cassandra

Messaging & APIs: Kafka, Google Cloud Pub/Sub, REST APIs, OAuth 2.0, JWT

Cloud, DevOps & Observability: Docker, Kubernetes, Google Cloud Platform, Alibaba Cloud, Git, Bitbucket, GitLab, CI/CD, Helm, Grafana, Datadog

Architecture & Leadership: System Design, Distributed Systems, SaaS/PaaS, Engineering Management, Technical Strategy, Project Delivery, Stakeholder Communication, Agile/Scrum, Mentoring

Experience

Engineering Manager

PT. Mid Solusi Nusantara (Mekari Talenta) | Jun 2025 – Present

Lead and develop a 10-person team comprising backend engineers, frontend engineers, and a solutions engineer. Drive performance, reliability, and delivery for Mekari Talenta's HRIS platform, which serves 50,000+ B2B customers and integrates with external partners.

- Led the re-architecture of financial and payroll disbursement systems, reducing processing time from 30 minutes to 2.5 minutes.
- Lead incident response and reliability improvements through automation, alerting, monitoring, and testing with Datadog, Grafana, Prometheus, and Playwright.
- Introduced AI-assisted development workflows using Claude, ChatGPT, and GitHub Copilot, reducing selected delivery cycles from two weeks to four days while establishing governance to maintain production quality.
- Led the AI-assisted development of a Learning Management System, delivering it in four months after the previous approach had remained incomplete for 18 months.
- Lead cross-functional collaboration across Product, Design, Infrastructure, Data, Security, QA, Commercial, and Technical Support teams, while coordinating with external partners.

Experience (continued)

Engineering Manager

GovTechEdu Indonesia | Apr 2022 – Dec 2024

Led and developed a team of 10+ architects, backend engineers, and frontend engineers responsible for building and operating a data visualization platform in collaboration with multiple government institutions.

- Designed a distributed, event-driven architecture using Kafka and Google Cloud Pub/Sub that met an SLO of 99.99% uptime and maintained p95 latency below 500 ms.
- Drove technical strategy and architecture decisions in alignment with stakeholders across multiple government institutions.
- Led the development of a highly available data visualization platform serving 500,000+ schools and 5+ million users, supported by Grafana and Prometheus.
- Introduced engineering best practices for government platforms, including automated testing, GitLab CI/CD pipelines, Docker, Kubernetes, and Google Cloud Platform.
- Improved team delivery through Scrum process optimization and individual mentoring.

Engineering Manager

PT. Bukalapak.com | Jan 2021 – Mar 2022

Led and developed a cross-functional team of 7+ backend, frontend, Android, and iOS engineers.

- Re-architected OAuth, user account, and authentication services, reducing response time from 3,000 ms to 300 ms and addressing single points of failure.
- Led architecture and system design for a mature, distributed SaaS and PaaS platform serving 5+ million daily active users.
- Partnered with engineering teams across the company to guide technical and architecture decisions while maintaining 99.99% platform uptime.
- Led security and compliance improvements, including incident response and mitigation for events with potential customer and company financial impact.
- Reduced production incidents from two to three per week to approximately one per month by strengthening automated testing, alerting, and monitoring with Datadog, Grafana, and the ELK Stack.

Backend Software Engineer

PT. Bukalapak.com | Jun 2017 – Dec 2020

Built and operated core account and authentication systems serving 40+ million users and handling 50,000+ requests per second.

- Optimized database queries and caching strategies, reducing response time from 3-5 seconds to 100-200 ms.
- Developed and maintained core authentication and account services handling 50,000+ requests per second.
- Built scalable microservices supporting 40+ million users.
- Implemented security practices including OAuth 2.0, JWT, and multi-factor authentication.

Education

Bachelor of Computer Science — University of Indonesia | 2013 – 2018
